

TOCHUKWU CHINATU

FULL-STACK DEVELOPER

Port Harcourt, Rivers State, Nigeria | chinatutochukwu018@gmail.com | +234 906 813 8044

linkedin.com/in/tochukwu-chinatu | github.com/Tochi8

SUMMARY

Full-stack developer passionate about building modern websites and applications that combine thoughtful design, scalable engineering, and meaningful user experiences. From business websites to SaaS platforms and Web3 products, I enjoy turning ideas into reliable digital solutions that are intuitive, performant, and built for long-term growth.

PROJECTS

Polly

A blockchain-powered voting platform for online communities that ensures every vote is transparent, tamper-proof, and permanently verifiable on-chain, helping build trust in the integrity of every result.

Tools: *Next.js, TypeScript, Solidity, Supabase*

GigaXbot

A Telegram bot that helps memecoin traders on the Solana chain with real-time analysis, position tracking, and profit/loss calculation, built for fast decision-making without switching between analysis tools.

Tools: *Python, Telegram API, DEX Screener API, Raydium API*

Crypto Street

A modern Web3 brand website for Crypto Street, showcasing the organization's mission, founder, and community-driven street interview series, and serving as a central hub for discovery, engagement, and contact.

Tools: *HTML, CSS, JavaScript*

PeakFit Gym

A conversion-focused website for a fitness brand, designed to turn visitors into clients through clear messaging, streamlined navigation, and easy access to membership and contact information.

Tools: *React, Tailwind CSS*

SKILLS

- Languages & Frameworks: JavaScript, TypeScript, React, Next.js, Node.js
- Databases & Backend: Supabase, PostgreSQL
- Web3 / Blockchain: Solana, Polygon, on-chain data verification
- Also working with: Rust, Python

EDUCATION

Self-Taught Full-Stack Development

Progressed from HTML/CSS and JavaScript to Node.js, React, Next.js, TypeScript, and Supabase, with hands-on experience in Web3 and blockchain development (Solana, Polygon).
